

Title of the Project

Group Number & Member Details

Outline of the Presentation

- Introduction
- Literature Review
- Takeaways / Research gaps
- Objectives
- Methodology
- Progress in terms of Project Objectives
- Weekly Timeline for Project completion
- References

Introduction

Literature Review

- The literature review could be based on any valid digitally verifiable source that you draw inspiration from, not just limited to journal papers.

Takeaways / Research gaps from literature

- What is your motivation behind doing this project?
- What are the gaps which makes your project worth doing?

Objectives

- Objectives are guidelines for what are to be expected as outcomes of the project.
- A good practice is to enumerate the entire project execution as 3 or 4 objectives and plan the work towards it.
- Objectives could be achieved in a serial manner or parallel manner, according to how you define it.
- **One of the objectives should be the evaluation metric associated with your project deliverables.**

Methodology - Overall

- General methodology of the project
- A flowchart or mind map will be useful for illustrating the same.
- **Clearly specify the probabilistic reasoning based module involved in the methodology (what kind of PGM or probabilistic methodology is used).**

Methodology – PR Inference

- Elaborate the probabilistic reasoning based inference methodology used in your project.
- Categorize the method(s) as exact or approximate methods.
- Inference calculation algorithms and details.

Methodology – PR Learning

- Description on algorithms used for learning part.
- For example, if using a BN – describe how the parameter and structure are learned.

Methodology – Decision, Intervention or What If scenarios

- This slide is applicable if you have a decision network / module or interventional analysis or What if scenarios associated with your project.
- Describe the details regarding the respective component of your project.

Methodology – Combining with Modern AI

- This slide is applicable if your are combining the project with current practices in AI.
- Details of how the probabilistic reasoning or PGMs are combined with current practices in AI involving ML and DL.

Progress in terms of Project Objectives

Weekly Timeline for Project completion
